Colorado State

QUESTIONS

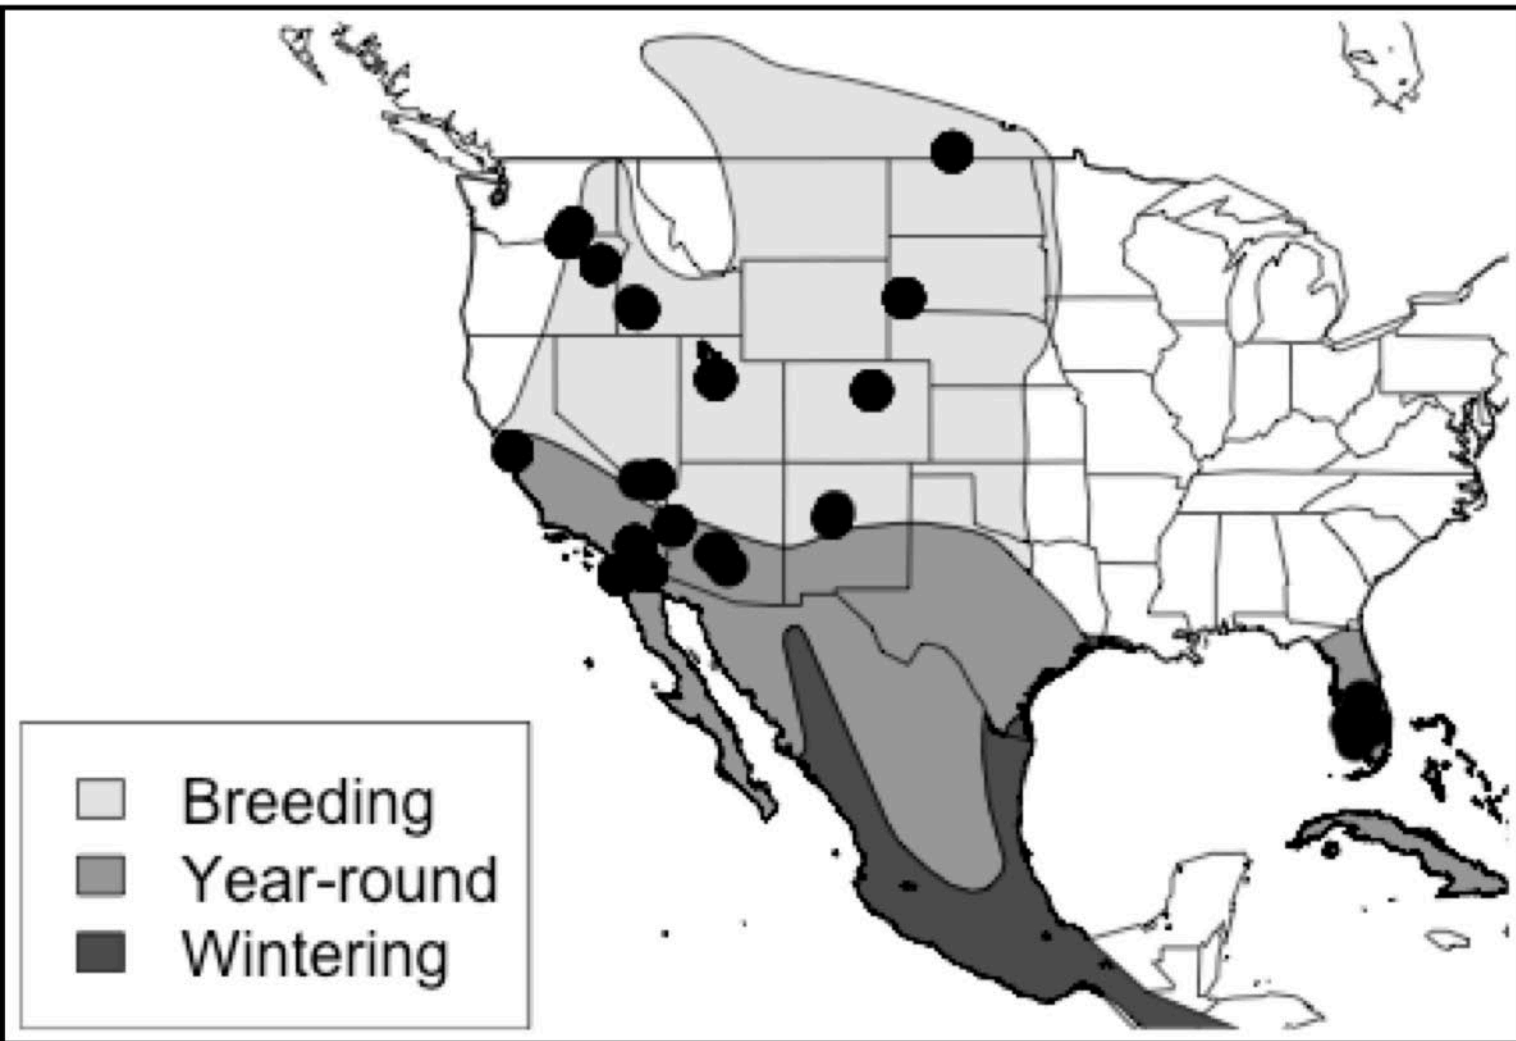

1. Is there any population structure?

- Gene flow patterns
- Genetic diversity

2. Is there any evidence for environmental adaption associated with migratory behavior?

SAMPLES

- Jim Belthoff, Boise State
- Lynne Trulio, San Jose State University
- Todd Katzner, USGS
- David Johnson, Global Owl Project
- Lisa Nordstrom & Colleen Wisinski, San Diego Zoo Institute for Conservation Research
- Lauren Meads, Burrowing Owl Conservation Society
- Stephen Peterson & Lucy Johnson, Assiniboine Zoo
- Troy Wellicome & Tatiana Hayek, Calgary Zoo
- Elizabeth White, University of Florida
- Kerrie Anne Lloyd, ASU-Lake Havasu
- Carl Lundblad, University of Idaho
- Michael Ingraldi & Dennis Abbati, Arizona Game and Fish Department

THE DATA

1. One High Quality Genome

- Reference Tool
- Average Depth 50X

2. Many Low Coverage Genomes

- Assessing Population Level Genetic Variation
- 214 BUOWs
- Coverage: 0.978X (0.0104X - 2.132X)
- Genetic Variants: 2M – 10M

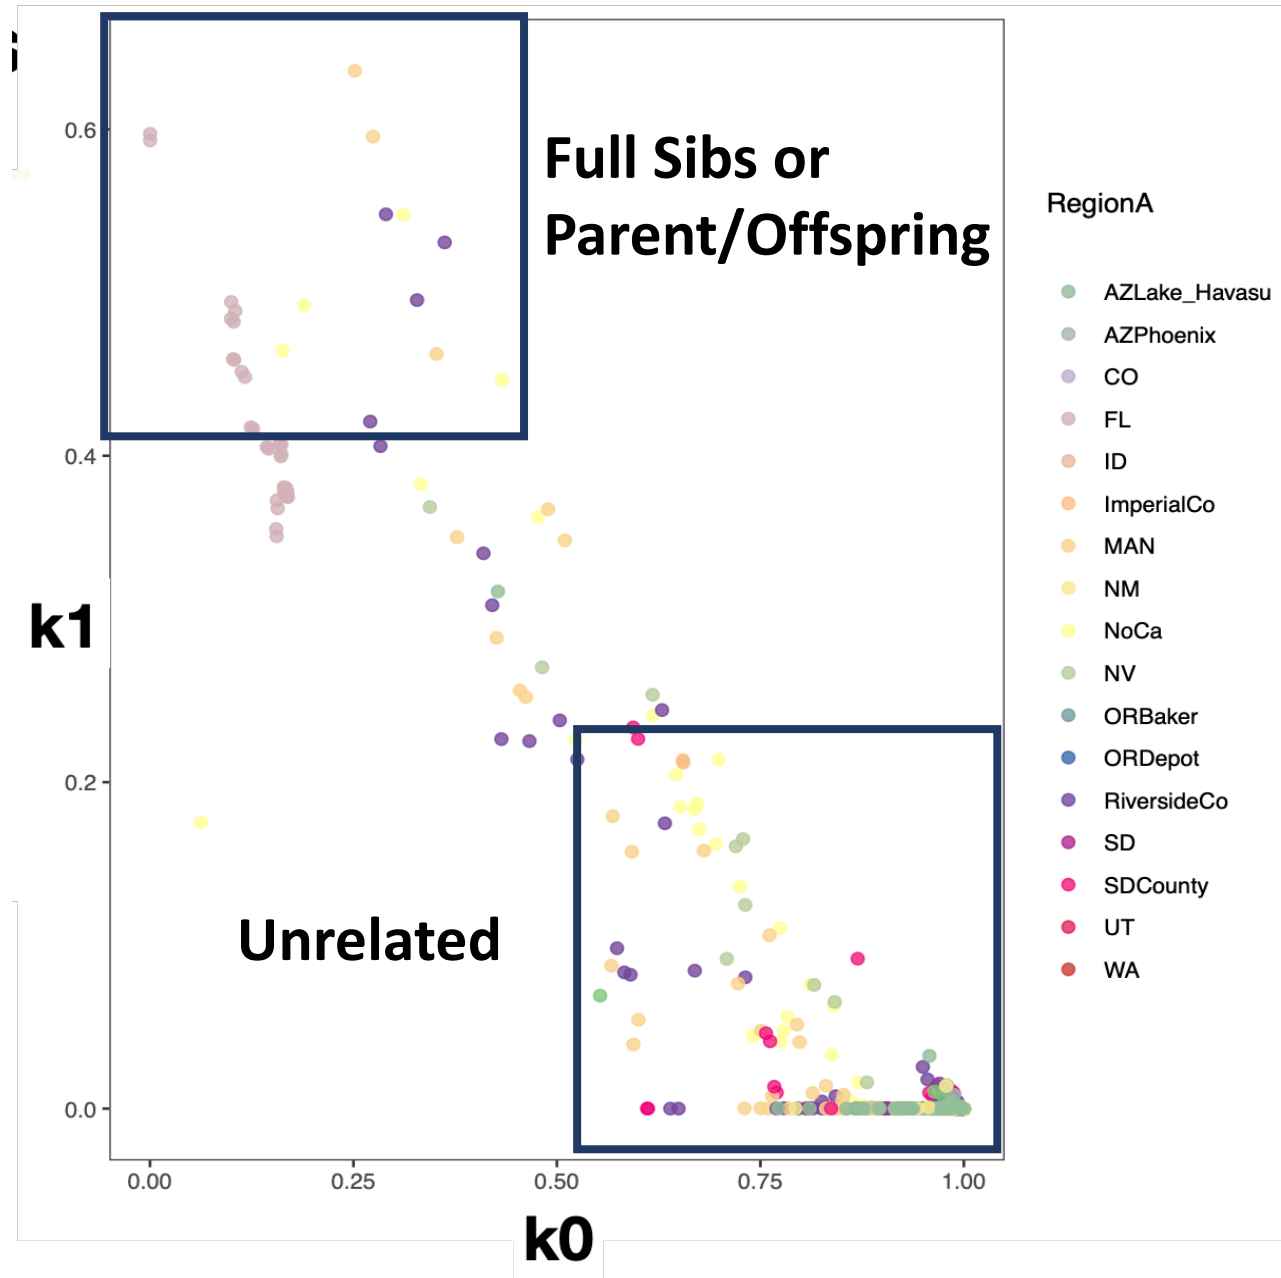

RELATEDNESS

A BIG ISSUE

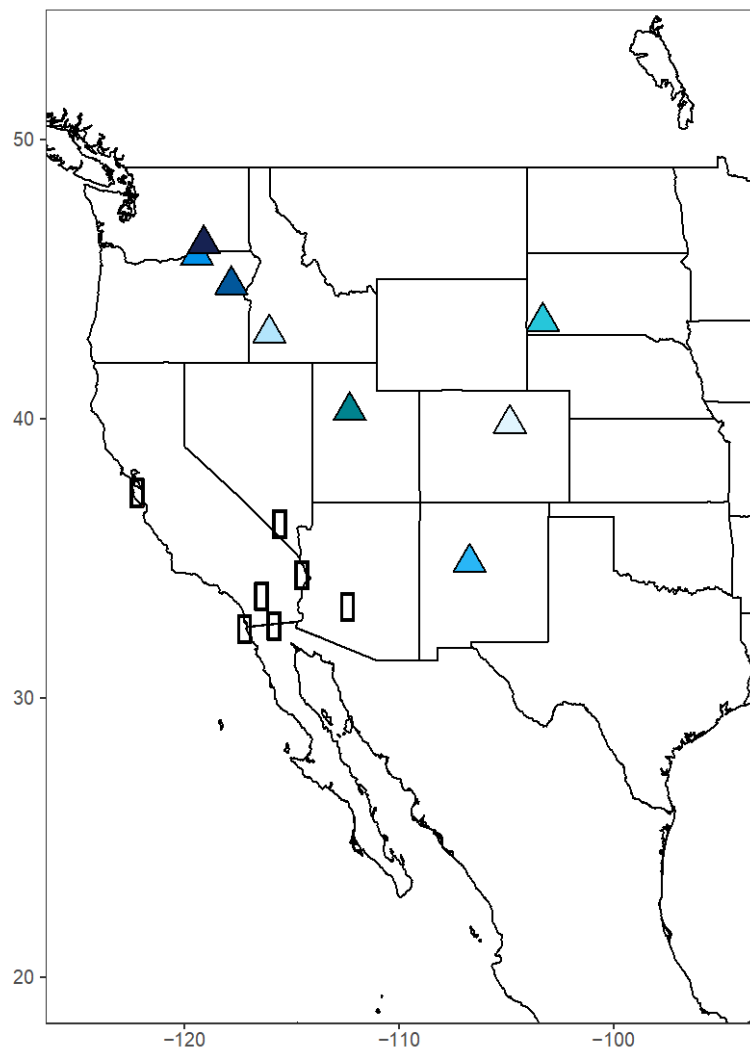

RELATEDNESS A BIG ISSUE

INBREEDING HIGHER IN RESIDENTS

STRUCTURED RESIDENTS VS. HIGH GENE FLOW MIGRANTS

QUESTIONS

1. Is there any population structure?

- Gene flow patterns
- Genetic diversity

2. Is there any evidence for environmental adaption associated with migratory behavior?

QUESTIONS

1. Is there any population structure?

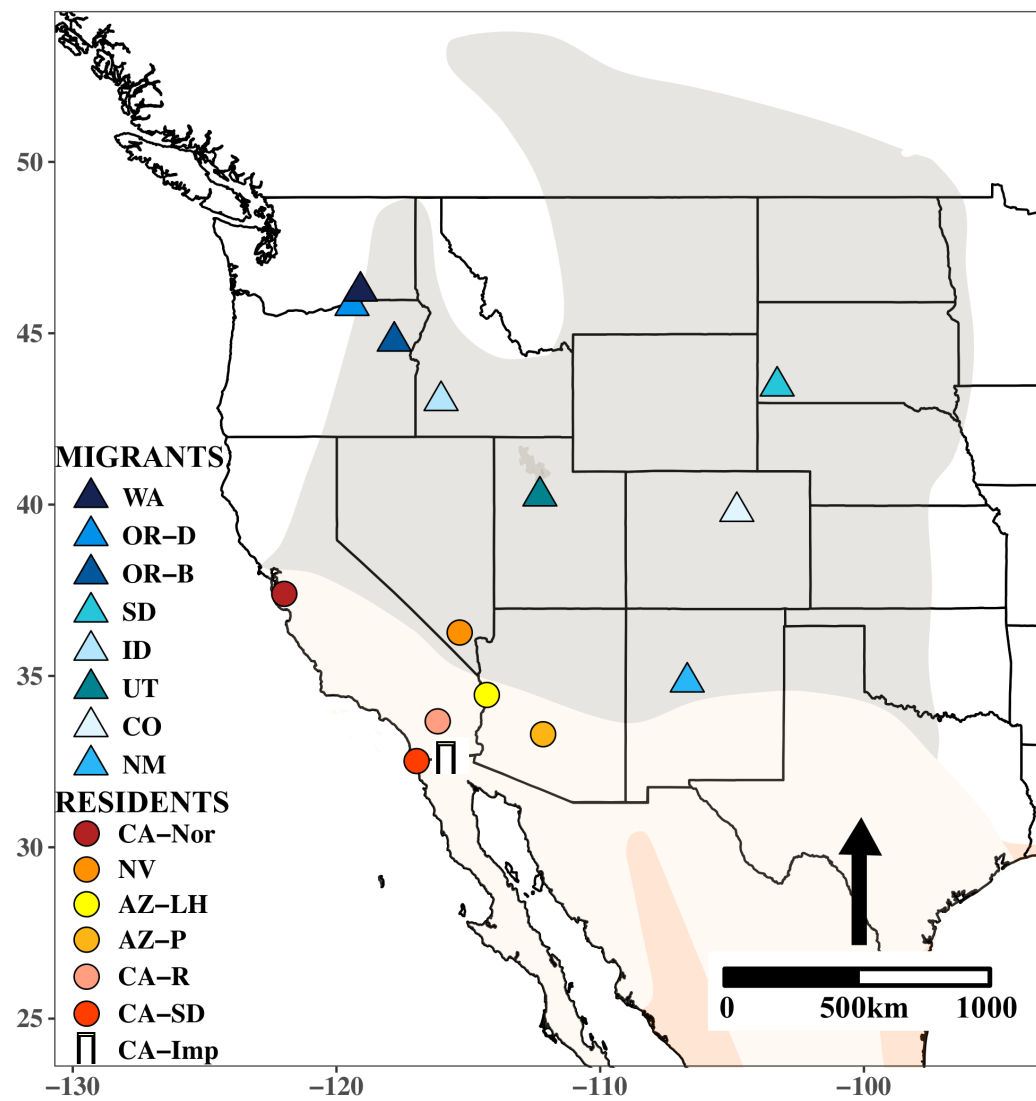

- Gene flow patterns – migrants panmictic, residents in IBD
- Genetic diversity – higher inbreeding among residents

2. Is there any evidence for environmental adaption associated with migratory behavior?

**Pooled Migrants Together and Residents Together --> Genomewide
FSTs → Top 0.1% Loci in Top 0.01% 50kb Windows**

Accuracy importance

 R^2 weighted importance

B03 = Isothermality
 LC08 = Barren/Open Area
 B17 = precip driest quarter
 B18 = precip warmest quarter

QUESTIONS

1. Is there any population structure?

- Gene flow patterns – migrants panmictic, residents in IBD
- Genetic diversity – higher inbreeding among residents

2. Is there any evidence for environmental adaption associated with migratory behavior?

- There seems to be!

Questions?

100 gradient forests with "environmental" variables shuffled
